

Feature Engineering for Time Series

Why Machine Learning?

→ often better (performance)

How

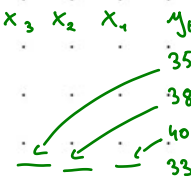

depends on features

- you have future data
 - data up until present (t)
 - static features
- predict x_t
use lag
= the same within timeseries

Lag feature

= derived from past values

	sales	x_3	x_2	x_1	y_t
d_1	35				35
d_2	38				38
d_3	40				40
d_4	33				33

validation

data in timeseries is not independent

—

Imputation

outliers

Transformation

Encoding
